

Precise System Scope & Active Features

This document details **ONLY the exact features and controls** built into the Macvel School Management APP project. Extraneous modules such as attendance tracking, fees/finance processing, and Superadmin roles have been completely excluded as per project requirements.

MODULE 1: ADMIN ROLE CONTROLS

1. User Onboarding & Management

- **Teacher Credential Creation:** Add & edit teacher login details.
- **Student Admissions:** Student profile creation & details entry.
- **Parent Linking:** Map parents to student accounts.

2. Institution Setup & Notices

- **School Profile:** Basic school name, logo & contact info.
- **Academic Session:** Configure active academic year.
- **Circulars & Announcements:** Send notifications to teachers and students.

MODULE 2: CLASS & SECTION CONTROLS

1. Class Architecture

- **Class & Section Creation:** Define grades and sections (e.g. 10-A).
- **Class Teacher Assignment:** Assign specific teachers to classes.
- **Subject Allocation:** Map subjects to respective classes.

2. Timetable Management

- **Class Timetable Setup:** Assign daily subject period slots.
- **Teacher Schedule:** Assign subject teachers per period.

MODULE 3: TEACHER CONTROLS

1. Classroom Operations

- **Homework Posting:** Assign daily homework & tasks.
- **Homework Review:** Check submitted homework from students.
- **Class Announcements:** Post class-specific notes.

2. Marks & Examinations

- **Marks Entry:** Input exam and test scores for students.
- **Report Card Generation:** Generate academic result cards.

MODULE 4: STUDENT MOBILE APP ACCESS

1. Student Portal

- **Daily Timetable View:** Check daily period schedules.
- **Homework Portal:** View homework assignments & submit completed work.
- **Digital Study Material:** View & download class notes.
- **Marks & Report Card View:** View exam scores & download report cards.

2. Technical Stack

- **Frontend:** React / Ionic Cross-Platform App.
- **Backend:** Node.js / Express REST API with JWT.
- **Database:** Supabase (PostgreSQL).
- **Deployment:** AWS EC2 Instance.
